MEDI-CAL FUNDED INDUCED ABORTIONS 1995

Medi-Cal Report published January 1997

ABSTRACT

This report provides summary tables on the number of fee-for-service Medi-Cal funded abortions performed during 1995, the type of facility where a procedure was performed, and Medi-Cal expenditures for these procedures. The data are presented on both county and state levels.

Questions regarding data provided in this report and any other inquiries related to Medi-Cal funded deliveries in California may be directed to [Samira Al-Qazzaz](#) at (916) 657-2966.

HIGHLIGHTS

- o Medi-Cal funded a total of 93,599 fee-for-service (FFS) abortions¹ in 1995 and paid an average of \$339 per procedure, totaling \$31.7 million for all abortions.
- o The average monthly rate of abortions per 1, 000 eligible women 15-44 years old, 6.8, was about seven percent lower than that of 1994, 7.3.
- o More than one-third, 32 percent, of Medi-Cal funded abortions were performed for women 20-24 years old.
- o Abortion services to hispanic females accounted for 31 percent of total abortions exceeding, for the second year in a row, that of white females.
- o OBRA eligibles accounted for about nine percent of total abortions which is the same as in 1994. Most of these abortions were in Los Angeles County, 37 percent.
- o More than two thirds of the abortions, 69 percent, were done at a physician's office averaging 58 abortions per office location.
- o The cost of an abortion performed on a hospital inpatient basis averaged \$2,111 per abortion. Abortions done at a physician office averaged \$294 per abortion which is lower than that of abortions done at clinics and hospital outpatient.
- o The number of Medi-Cal eligible women who received abortion services was 86,643, about ten percent less than 1994. Ninety-two percent of these women had only one abortion.

¹The term abortion as used in the report refers to induced abortions only.

INTRODUCTION

The number of induced abortions funded by Medi-Cal during 1995, on a fee-for-service (FFS) basis, 93,599, is about ten percent lower than 1994. Medi-Cal payments for these abortions was about eleven percent lower than 1994.

The decline is partly due to the implementation of managed care programs in rural counties. As explained in "Data Qualification" on page 2. Claims for services rendered to enrollees in these programs were not completed for the period of this report.

While the number of FFS Medi-Cal funded abortions decreased ten percent during 1995, the number of eligible women ages 15-44 decreased three and a half percent from 1994 to 1995. This resulted in about seven percent drop in the rate of average monthly number of abortions per 1,000 eligible women 15-44 years old. This drop is a continuation of the trend that started in 1988 and adds up to about 36 percent decline through 1995.

Unfortunately, the total number of abortions for California women in 1995 is not available. The 1993 total of 323,944 was estimated by the Center for Disease Control (CDC). Medi-Cal abortions, including 9,000 estimated abortions for PHP enrollees, accounted for 38 percent of the 1993 CDC estimate.

The CDC total is about four percent lower than the 1992 estimate of 338,700. Medi-Cal funded induced abortions increased two percent for the same period, from 112,294 in 1992 to 114,932 in 1993.

DATA QUALIFICATIONS

This report discusses abortions which occurred during calendar year 1995 and appear on the Medi-Cal paid claims file between January 1995 and September 1996. The 21-month file was used in order to allow for delays in submitting or processing hospitals, clinics and physicians claims.

Abortions performed for enrollees in Prepaid Health Plans (PHPs) are not included in this report. Medi-Cal payments to these PHPs are made monthly on a capitated basis. The plans do not submit claims for individual services. Accordingly, it is not known exactly how many abortions these plans account for. A rough estimate is 13,900.¹

Beginning April 1, 1994, the Geographic Managed Care (GMC) Program was implemented in Sacramento County. This pilot project was authorized under AB336 and SB485 to enroll AFDC, AFDC linked recipients and the medically indigent children into contracted comprehensive managed care plans on a mandatory basis. Claims of medical services rendered to enrollees in GMC were not completed for the period of this report. Based on prior years' data, an estimated 3,500 Medi-Cal funded abortions are covered by the GMC program and are not included in this report.

Solano, is another county for which our count of abortions were incomplete. A county organized health system (COHS), the Solano Partnership Health Plan (SHP), was implemented as of May 1, 1994. Certain recipients are excluded from this program such as Income Disregard eligibles. Counts for Medi-Cal Services rendered to enrollees in the SPH plan during 1995 were not yet available at the time this file was put together. There is an estimated 1,500 abortions missing from the total for Solano.

In October, 1995, a county health initiative was implemented in Orange County; the Orange Prevention and Treatment Integrated Medical Assistance Plan (Cal OPTIMA). Part of the 25 percent decline in the number of induced abortions for Orange County could be a result of the delay in sending claims for such services on time. Accordingly, an estimated 1,000 abortions are missing from the total for Orange.

¹

This estimate is based on the number of abortions for Medi-Cal FFS eligible women 15-44 years old in aid categories, Families, Blind, Disabled and Medically Indigent (80,801), calculated in relation to the monthly average number of FFS eligible women between 15 and 44 years (937,713), and the monthly average number of PHP female enrollees ages 15-44 in the same aid categories (161,413). Totals are taken from "State of California, Department of Health Services, CID Eligibles, Age/Sex Characteristics, July 1995, run date January, 1996".

Medi-Cal FFS Eligibles, Induced Abortions, and Expenditures

While total Medi-Cal FFS expenditures increased about 300 percent from 1977 through 1995, payments for Medi-Cal funded induced abortions fluctuated from year to year, from a low of \$26.6 million in 1984 to a high of \$40.7 million in 1991. The 1995 total was six percent less than the 1977 total.

The average monthly number of eligible women ages 15-44 decreased three and a half percent from 1994 to 1995, while the number of abortions for the same age group decreased ten percent.

The average monthly rate of abortions per 1,000 eligible women has been steadily declining from 14 in 1977 to 6.8 in 1995.

State of California, Department of Health Services, HR70 Summary, Maternal Care File, 1995.

Distribution of Medi-Cal Funded Induced Abortions by Age and Ethnicity

Women ages 20-24 accounted for 35 percent of abortions for hispanics and blacks. The same age group of asian and pacific islanders accounted for 27 percent of total abortions for that group.

For the third year in a row since 1988/1/, hispanic women accounted for the highest percentage of abortions, 30 percent during 1993 and 1994 and 31 percent during 1995. During 1988 white women accounted for 35 percent of abortions followed by black women, 25 percent, and then hispanic women, 20 percent.

The percentage of abortions for women of Asian and Pacific Islands origin has slowly increased during the past four years from five percent in 1990 to 6.7 in 1995. In the mean time the percentage of abortions for black women has dropped five and a half percent from 26.5 percent in 1990 to 21 percent in 1995.

NOTE: For county data by ethnicity see Table 8.

SOURCE: State of California, Department of Health Services, HR70 Summary, Maternal Care File, 1995.

Distribution of Medi-Cal Funded Induced Abortions by Age and Aid Category

As in previous years, eligible women in the aid category AFDC accounted for the highest percent of Medi-Cal funded induced abortions, 79 percent. The second largest group is the OBRA/1/ which accounted for eight and a half percent of total abortions. This is one half of a percent less than the 1994 proportion, nine percent.

The IRCA/1/ program was discontinued on December 31, 1994. The few abortions listed here are possibly due to the lag between the time the service was rendered and the time the claim was returned.

/1/ OBRA and IRCA refer to two federally mandated programs; the Omnibus Budget Reconciliation Act (OBRA) and the Immigration Reform and Control Act (IRCA) both of 1986. Under IRCA the status of certain aliens unlawfully residing in the United States may be adjusted to permanent resident status. Otherwise eligible amnesty aliens who are aged, blind, disabled, or under 18 are entitled to full Medi-Cal services. Those who are not, are entitled to restricted Medi-Cal services during the first five years of amnesty, and to full services there-after. OBRA applies to other aliens such as undocumented and temporary visa aliens. They are only entitled to restricted Medi-Cal benefits. The IRCA program was discontinued in December 1994.

/2/ Includes 31 abortions for IRCA eligible women in the income disregard category poverty level with IRCA status.

/3/ Includes 500 abortions for OBRA eligible women in the income disregard category.

/4/ This federal and state funded program became effective in July 1989 under the title 185 percent poverty. The name change occurred in September 1994. It extended Medi-Cal coverage for program-related services to pregnant women whose family income does not exceed 185 percent of the federal poverty level. The 1995 total does not include women with OBRA or IRCA status. See footnotes 2 and 3.

Note: OBRA abortions for 1994 were erroneously listed at a total of 9,182. The correct figure is 9,373. For county data by aid category see Table 9.

Source: State of California, Department of Health Services, HR70 Summary, Maternal Care File, 1995.

Distribution of Medi-Cal Funded Induced Abortions by Type of Facility

During 1995, the largest number of Medi-Cal funded abortions was performed at physicians' offices, accounting for 69 percent, followed by clinics, 18 percent. Sixty percent of Medi-Cal payments for abortion services was to physicians. Abortions performed at physicians' offices were the least costly. At an average cost of \$294 per abortion it was \$59 less than the cost at a clinic and \$185 less than the cost at a hospital outpatient department.

Even though only one-half of a percent of all abortions were performed at hospital inpatient departments, Medi-Cal payments for these abortions accounted for about four percent of total Medi-Cal abortion expenditures, averaging \$2,111 per abortion. The average cost of abortion, excluding those done in hospital inpatient departments was \$328.

SOURCE: State of California, Department of Health Services, HR70 Summary, Maternal Care File, 1995.

The number of clinics and physician offices providing abortion services was four clinics and 39 offices more than 1994 yet the number of abortions for these facilities decreased thirteen percent for the clinics and 10 percent for the physician offices. Outpatient community hospitals also reflected less abortions, seven percent. However, the number of such hospitals dropped to 293 from 310.

Frequency of Medi-Cal Funded Induced Abortions

During 1995, as in previous years, an estimated one percent or less of all FFS Medi-Cal eligible women ages 15-44 had an abortion. About eight percent of these women had more than one abortion throughout the year. The largest group was women ages 20 to 24 who accounted for 36 percent of all repeat abortions.

County Distributions of Medi-Cal Funded Induced Abortions

The following four tables display the distribution of abortion services by county. Individual county data do not necessarily reflect the same number and expenditure distributions which exist statewide.

Data provided in Tables 7, 8, 9, 11 and 12 are distributed by county of eligibility, i.e., the county that appears on the Medi-Cal card of the beneficiary. It should be noted that this is not necessarily the county of residence at the time of service, since a beneficiary could have moved from one county to another, and her eligibility might have been transferred at the time the service was rendered. Data in these tables may also include services performed outside California for a Medi-Cal beneficiary.

Data provided in Table 10 are distributed by county of provider; i.e., county of occurrence.
